EDUCATION

University of New South Wales
Structural Engineering (Master)

General Assembly
Software Engineering Immersive

PERSONAL WEBSITE

https://frankda.info/

ABOUT ME

I'm a full stack JavaScript developer who is passionate about web development and making fast, responsive sites that delight through micro interactions.

Software development was not a direct route for me. I spent the first two years of my career in construction engineering. This helped to improve my problem solving skills and gain valuable lifelong soft skills. After finding out my true passion was in web development, I took time from work to study at General Assembly completing their Software Engineering Immersive course and haven't looked back since.

LATEST PROJECTS

Price Check

- Built with React, Expressjs, MongoDB
- A web crawler that can scrape prices from online stores
- https://price-to-price.netlify.app

Story Map - General Assembly

- Built with Ruby on Rails, PostgreSQL, JavaScript, Leaflet
